The goal of the program is to determine the amount of money it would cost someone if they went to the market to gather produce. Firstly, the user will determine how much money they would have when going to the market, something realistic is preferred, such as about 57.11 for example. Then I will let the programmer choose the pricing. (Though I will provide example prices, Apples:\$2.00, Carrots:\$2.50, Corn: \$6.00 Lettuce: \$4.75. Blueberries: \$4.99) After the user enters all of what they need, the program will return the amount of money that the user has Left over, returning it in five dollar bills, Twonies, Loonies, Quarters, Dimes, Nickels and Pennies respectively

Test Cases	Running
2 Lettuce 2 Carrots 1 Apple	40.61 left over, or 8 five dollar bills 2 quarters 1 dime 1 penny
3 Blueberries 3 Corn	24.14 left over, or 4 five dollar bills 2 toonies 1 dime 4 pennies
1 of each	36.87 left over 7 five dollar bills 1 loonie 3 quarters 1 dime 2 Pennies
4 apples 4 Carrots 2 Corn 2 Lettuce 2 Blueberries	7.63 left over, or 1 five dollar bill 1 toonie 2 quarters 1 dime 3 pennies

3 Apples 1 Blueberry	46.12 left over, or 9 five dollar bills 1 loonie 1 dime Two pennies
4 carrots 2 corn	35.11 left over 7 five dollar bills 1 dime 1 penny
5 blueberries	32.16 left over 6 five dollar bills 1 toonie 1 dime 1 nickel 1 penny
7 corn	15.11 left over 3 five dollar bills 1 dime 1 penny
1 apple 1 carrot 1 lettuce	47.86 left over 9 five dollar bills 1 toonie 3 quarters 1 dime 1 penny
5 corn 3 blueberries 3 Apples	6.14 left over 1 five dollar bill 1 loonie 1 dime 4 pennies
6 corn	11.61 left over

2 lettuce	2 five dollar bills 1 loonie 2 quarters 1 dime 1 penny
6 apples 4 blueberries	25.15 left over 5 five dollar bills 1 dime 1 nickel
3 lettuce 3 corn	24.86 left over 4 five dollar bills 2 toonies 3 quarters 1 dime 1 penny
10 carrots	32.11 left over 6 five dollar bills 1 toonie 1 dime 1 penny
8 Apples	41.11\$

	8 five dollar bills 1 loonie 1 dime 1 penny
1 corn	51.11 left over 10 five dollar bills 1 loonie 1 dime 1 penny
